

Gesix Showcases Productivity Tools for SAP Manufacturing

EzySolutions Blue

Voice Enabled Data Capture

topSPEECH-Lydia - ITS - Multimodal allows for completely 'Hands Free' movement of materials.

Whether Picking, Packing or Counting Stock the user has both hands free to manage the stock items, as commands are received in real-time from SAP via a headset attached to a RF enabled PDA device, with resultant confirmations via the same device directly to SAP.

Using ITS, in Core SAP, *topSPEECH-Lydia - ITS - Multimodal* is at the forefront of SAP technology, allowing Voice Enabled Data Capture to be seamlessly integrated with SAP.

Work Scheduling for SAP

Effective scheduling of planned but not yet scheduled work, and backlog work, is a function that enables optimum utilization of all company and external resources, for example, labour (including contract labour), equipment, stores and purchases and obviously, in a maintenance environment, the equipment that requires maintenance, to undertake the work.

Work Scheduler consolidates approved work requests, work orders, preventive maintenance work orders, project work orders, production work orders, materials and equipment readiness and presents filtered data to the work scheduler to allow the scheduling process to be completed using graphical tools to manipulate data into a cohesive work schedule matching backlog and unscheduled work to optimize equipment availability, resource utilisation and to therefore increase uptime.

Integrated with SAP *Work Scheduler* will help you streamline your operations, allowing you to get more out of your investment in SAP.

Dimensioning for SAP

WaveTrak 3DPack quickly and efficiently selects the best possible shipping container(s) to use in your pick/pack operations to ensure you are not 'shipping air.'

WaveTrak 3DPack is designed to seamlessly integrate to your SAP environment by taking actual material dimensions and weights on a delivery and run through our 3DPack Engine consisting of finely tuned complex algorithms.

Mobile Data Capture for SAP

Gesix provides a range of Mobile Data Capture services exclusively to SAP users, such as:

- SAPConsole Implementation
- WebSAPConsole Implementation
- Web Application Server/ NetWeaver
- Process Design
- ABAP Development
- RF Site Surveys & Installation
- RF Hardware Provision
- Training & Support
