

## ◆ Situation:

- ◆ Hu-Friedy is a world leading manufacturer of dental instruments. After converting to SAP, Hu-Friedy was faced with two problems.
- ◆ The first problem was SAP's inability to accept journal entries of more than 999 lines. Hu-Friedy have multiple monthly entries greater than 999 lines and breaking these down into 2 or 3 entries left room for manual errors.
- ◆ The second problem was streamlined reporting. Hu-Friedy were able to create many monthly reports in GRR2 which they then exported to Excel so they could be modified or linked to other files for their month-end reports. However, these reports took a long time to run. They also wanted to change the layout of their main income statement, recreating the reports in SAP for their multiple companies. Continuing to use SAP to generate reports was not feasible.

## ◆ Action:

- ◆ Hu-Friedy installed EzySolutions.

## ◆ Outcome:

- ◆ "EzySolutions resolved the greater than 999 lines journal issue by automatically creating as many entries as necessary, without any additional work by the user.
- ◆ EzySolutions also streamlined our reporting needs. Two of our companies are foreign with a different currency. EzySolutions allowed us to extract the data from SAP in their local currency and in the same Excel file, create multiple tabs to issue reports in local currency and USD. This way our foreign subsidiary was able to review their financials in their local currency as well as reporting currency. We could not do this in SAP.
- ◆ Due to the ease of creating reports in SAP, we were able to create more financial reports using EzySolutions than we were able to create in SAP. Generating all of our month-end reports using GR55 took close to a full day.
- ◆ Using EzySolutions, we're able to generate all our reports, plus the new reports, in half that time.
- ◆ This provides us more time to analyze the results and late entries are necessary, we don't have to lose another day re-running all of the reports, it's a simple update in EzySolutions."
